Expert Talk on

**Future-Rady : Developing Global Skills in a
Rapidly Transforming Economy**

Date: 08-04-2025

Event Report

An Expert talk by "Mr. Ritesh Vajariya" was held in ICT department by "DATA SCIENCE CLUB" for semester –2,4,6,8 students on 08-04-2025. The session was all about him sharing his immense experience that he holds in the field of AI and GenAI and guiding students towards the right path for making their career successful in the rapidly transforming global economy.

Expert's Background

"Mr. Ritesh Vajariya" Founder, AI Guru and Head of GenAI at Cerebras delivered a talk on guiding students about preparing themselves for global opportunities in the field of Artificial Intelligence and Data Science. Mr. Vajariya has spent significant years of his life in the field. He started his journey in technology and has dedicated his career working in various aspects of AI development and implementation.

He currently serves as the Head of GenAI at Cerebras, where he leads initiatives in generative artificial intelligence research and applications. Prior to this role, he was a Gen AI Leader at AWS, where he helped develop and implement large-scale AI solutions for enterprise clients.

In the early years of his career, he and his team were exploring AI technologies for business transformations across various sectors. One of the key areas he focused on was developing scalable AI solutions that could be implemented across different industries.

He has successfully developed state-of-the-art algorithms using Machine Learning approaches for various business applications and has contributed to significant advancements in the field of generative AI.

He maintains connections with academia as well, frequently giving guest lectures and workshops at prestigious institutions. His work bridges the gap between theoretical AI research and practical industrial applications.

He has several patents to his name related to AI technology and has published research papers in reputed international journals.

TOPICS OF DISCUSSION

- **Beginners:** The importance of foundational learning in AI and data science was discussed initially. He emphasized that beginners should focus on mastering the core principles through structured courses, whether online or part of academic curriculum. Learning the concepts from scratch with emphasis on mathematics, statistics, and programming is crucial.
- **Upgrade skills:** After acquiring basics, one needs to explore specific domains of interest. The AI landscape consists of various sub-domains like Machine Learning, Deep Learning, Natural Language Processing, Computer Vision, and Generative AI. He highlighted how GenAI is transforming various sectors including healthcare, finance, manufacturing, and creative industries. Students need to identify their stream of interest and upgrade all the necessary skills through continuous practice and project work.
- **Learn from Experts:** Learning from experienced professionals is a vital part of the growth process. He recommended following thought leaders in the field through platforms like LinkedIn, GitHub, and research publications. He specifically mentioned conferences like NeurIPS, ICML, and CVPR as important sources for staying updated with cutting-edge research. He also emphasized the importance of participating in online communities and open-source projects to gain practical experience.
